Professional Summary

Data Analyst / Data Scientist with 9 months of internship experience using SQL and Python for data analysis, reporting, automation, and business insights. Processed 70,000+ records, built Power BI dashboards, and reduced manual reporting effort by approximately 40% through Python automation. Hands-on experience with SQL analytics, data cleaning, EDA, machine learning, and deploying data-driven applications.

Technical Skills

- **Data Analysis:** Python, Pandas, NumPy, Data Cleaning, EDA, Statistical Analysis, Data Visualization, Matplotlib, Seaborn, Power BI, KPI Dashboards
- **SQL & Databases:** Advanced SQL, MySQL, SQL Server, Database Design, Normalization, Joins, CTEs, Subqueries, Correlated Subqueries, Window Functions, Aggregations, CASE Statements, TIMESTAMPDIFF, COALESCE, Query Optimization, Indexing
- **Machine Learning & AI:** Machine Learning, Deep Learning, Generative AI, OpenAI APIs, Prompt Engineering, Scikit-learn, TensorFlow, Keras, ANN, Classification, Regression, Feature Engineering, Hyperparameter Tuning, GridSearchCV, SMOTE
- **Programming & Development:** Python, SQL, Basic Java, OOP, JSON, Streamlit
- **Tools & Engineering:** Git, GitHub, Render, Jupyter Notebook, Google Colab, ETL, Data Transformation, Data Integration, Data Modeling, Process Automation, Root Cause Analysis, Technical Documentation

Work Experience

Data Scientist Intern

Apr 2025 – Jan 2026

Innomatics Research Labs, Bengaluru

- Wrote and optimized SQL queries using joins, CTEs, subqueries, aggregations, and filtering logic; applied indexing and query restructuring to improve reporting workflow performance.
- Processed and analyzed **70,000+ records** using Python and SQL, performing data cleaning, preprocessing, validation, and exploratory data analysis for business reporting.
- Built KPI dashboards and business intelligence reports using **Power BI and Matplotlib**, replacing static manual reports used during stakeholder reviews.
- Automated repetitive data processing workflows using Python, reducing manual effort by approximately **40%**, and performed root cause analysis to resolve data inconsistencies.
- Gathered requirements from business and technical stakeholders and translated them into structured SQL queries, analytical outputs, and dashboard specifications.

Projects

Amazon Price Analysis – Python Data Analysis

GitHub

- Performed exploratory data analysis on Amazon product pricing data using Python, Pandas, NumPy, Matplotlib, and Seaborn.
- Cleaned and transformed product data, handled missing values, generated descriptive statistics, and analyzed price distributions and relationships between product attributes.
- Created visualizations and correlation analysis to identify pricing patterns, trends, and business insights.
- **Tech Stack:** Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook

Vehicle Tracking SQL Analysis – MySQL Database Analytics

GitHub

- Designed a relational MySQL database covering vehicles, routes, scheduled arrivals, actual arrivals, and vehicle GPS pings for transportation analytics.
- Developed **114 SQL analysis queries** covering INNER/LEFT/SELF JOINS, CTEs, subqueries, correlated subqueries, EXISTS/NOT EXISTS, GROUP BY, HAVING, aggregations, CASE, UNION/UNION ALL, string functions, and date/time functions.
- Analyzed vehicle and route performance using average delays, maximum delays, on-time versus delayed arrivals, delay percentages, arrival statistics, and stop-level performance.
- **Tech Stack:** MySQL, SQL, Database Design, Git, GitHub

Mobile Compare – Phone Comparison Web App

Live Demo | GitHub

- Designed and built a web application for comparing mobile phones based on specifications including RAM, storage, camera, display, battery, processor, and indicative price.
- Added direct Amazon and Flipkart search links and deployed the application publicly using GitHub and Render.
- **Tech Stack:** Python, FastAPI, JavaScript, JSON, REST API, GitHub, Render

Diabetes Risk Prediction – Deep Learning Web App

GitHub | Live Demo

- Built an end-to-end deep learning pipeline for diabetes risk prediction using the BRFSS health indicators dataset, covering preprocessing, feature scaling, model training, and prediction.
- Designed and trained an Artificial Neural Network classifier using TensorFlow/Keras and integrated the trained model with a fitted scaler for real-time predictions.
- Deployed the trained model as an interactive Streamlit application for user-driven prediction.
- **Tech Stack:** Python, TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Streamlit

Certifications

- Python Programming and SQL Development Certification
- Generative AI Productivity Skills – Microsoft and LinkedIn Learning
- Forage Job Simulations – Deloitte Data Analytics, BCGX Generative AI, PwC Digital Assurance

Education

Bachelor of Technology in Electrical and Electronics Engineering

2022 – 2025

QIS College of Engineering and Technology, Ongole

CGPA: 8.1/10
